Doctor Appointment System

Introduction & Purpose

This report presents the technical design of a Doctor Appointment System intended to manage doctor information, available appointment timings, locations, and patient bookings efficiently. The system consists of two main sides: an Admin/Doctor Management Side and a Client/Patient Side.
The purpose of this document is to describe the application's functional scope, database structure, relationships between entities, screen flow, and core operations required to manage and book appointments.
The system allows an administrator to log in, add doctor information, define available locations and timings, and manage appointment schedules. Patients can view available doctors, select a location and suitable timing, enter their information, and book an appointment.

Scope

The scope of this report covers the functional and databaseThis report presents the technical design of a Doctor Appointment System intended to manage doctor information, available appointment timings, locations, and patient bookings efficiently. The system consists of two main sides: an Admin/Doctor Management Side and a Client/Patient Side.
The purpose of this document is to describe the application's functional scope, database structure, relationships between entities, screen flow, and core operations required to manage and book appointments.
The system allows an administrator to log in, add doctor information, define available locations and timings, and manage appointment schedules. Patients can view available doctors, select a location and suitable timing, enter their information, and book an appointment.

design of the Doctor Appointment System.

The system includes

- Admin login
- Admin dashboard
- Doctor information management
- Location management
- Appointment timing management
- Patient appointment booking
- Appointment management
- Appointment status management
- Database storage of doctors, patients, locations, timings, and appointments

The report does not cover advanced deployment infrastructure or third-party integrations.

System Overview

The Doctor Appointment System provides a centralized platform for managing doctor availability and patient appointments.
The administrator first logs into the system and accesses the dashboard. From the dashboard, the administrator can add doctors, their specialties, available locations, and appointment timings.
On the client side, patients can select a location and view doctors and available timings. After selecting a suitable doctor and time, the patient completes an appointment form. The appointment is then stored in the database and displayed in the admin/doctor dashboard.

Main Users

Admin

The administrator manages the complete appointment system.
Admin functions include:

- Login
- Dashboard
- Add doctor
- Edit doctor information
- Delete doctor
- Add location
- Add available timings
- View appointments
- Update appointment status
- Manage patient information

Patient / Client
The patient uses the client application to book an appointment.
Patient functions include:

- View available locations
- View doctors
- View available timings
- Select doctor
- Select appointment time
- Enter personal information
- Book appointment
- View booking confirmation

High-Level Screen Flow

Admin Flow

Admin Login → Admin Dashboard → Doctor Management → Add/Edit Doctor → Location Management → Timing Management → Appointment Management → Appointment Details
Patient Flow
Home Page → Select Location → Select Doctor → Available Timings → Appointment Form → Confirm Appointment → Booking Confirmation
